

EXPLANATION OF PLATES

and

LIST OF SPECIES.

In every case the description of the species bears the same serial number as the figure of it. As almost every species and variety is figured, the explanation of the plates becomes a complete list, by simply including the five unfigured forms with the explanation "not figured."

Magnification is not uniform. Many of the figures were made with camera lucida and others with projection apparatus, but these aids do not work well with genitalia, and most of the drawing was free-hand.

In each case the figure shows the male genitalia drawn out and viewed from the left side, unless otherwise indicated. Hairs on forceps and accessory plate are generally omitted for simplicity, unless very distinctive.
