

Acknowledgments

I sincerely thank the following individuals for arranging loans of material: D. Azuma (ANSP), D. H. Kavanaugh (CASC), F. G. Andrews (CDAE), J. T. Doyen (CISC), J. M. Campbell (CNCI), E. R. Hoebeke and J. K. Liebherr (CUIC), I. Löbl (MHNG), A. F. Newton, Jr. (FMNH), K. R. Methven (INHS), J. P. Donahue (LACM), D. G. Furth (MCZC), R. L. Blinn (NCSU), C. A. Triplehorn (OSUC), J. D. Lattin (OSUO), L. S. Kimsey (UCDC), F. W. Merickel (UICM), D. S. Chandler (UNHC), G. N. House (USNM), and R. S. Zack (WSUC) and Walter Suter for the loan from his personal collection. I thank Gloria N. House for sending the Schaeffer and Casey type material from the USNM and assisting with locating the Marsh holotypes for *L. similis* and *L. insignis*. I also acknowledge the California State Park Service and the individual park rangers for permission to collect within the state parks of northwestern California during the fall of 1988 and spring of 1989. I am indebted to Nancy Cherim for her assistance with the electron microscope and taking the scanning electron micrographs. I also thank John Doyen, and to the reviewers for their helpful suggestions during the final drafts of this work. Funding for work with the scanning electron microscope was provided by University of New Hampshire's Circulating University Research Fund Grant 1312 UAB CUJ9. This work is in partial fulfillment of a Master of Science degree at the University of New Hampshire. I especially thank Don Chandler, John Burger, and R. Marcel Reeves for their encouragement and guidance during the completion of this work in my formative years of graduate school.
