THE DISPLAYS AND SONATIONS OF THE BLACK-CHINNED HUMMINGBIRD (TROCHILIDAE: ARCHILOCHUS ALEXANDRI)

Teresa J. Feo^{1,2,3} and Christopher J. Clark^{1,2}

¹Museum of Vertebrate Zoology, 3101 VLSB, University of California, Berkeley, California 94720, USA

In Feo and Clark (Auk 127:787–796), we reported that the frequency of the shuttle display was 0.534 \pm 0.111 Hz. This value is actually the inverse of the frequency (i.e., the period). The correct

value for the frequency is 1.9 \pm 0.24 Hz. This mistake does not affect any of the other results or conclusions drawn in the paper. We sincerely regret this error.
